Product Manager · Mobile Apps, AI, IoT & B2B/B2C Platforms

Summary

I'm a Product Manager with a product design background and 10 years of experience across industrial design, UX, and product management. I turn user needs and technical constraints into clear priorities and shippable scope for connected e-bike apps and dealer tools, align app, firmware, hardware, QA, and external vendors through launch, and use feedback and data to keep improving core experiences.

Work Experience

Product Manager

Apr 2022 – Present

Hyena Inc., Taichung, Taiwan

Own consumer e-bike apps (iOS & Android) and B2B dealer service tools for an e-bike drive-system maker.

- Led a new ride-tracking app from a scattered concept to its first iOS release: narrowed scope to the core ride experience as the team shrank, wrote PRDs, rebuilt the roadmap around actual capacity, and defined the tracking plan.
- Delivered a warranty-claim and parts-ordering web platform for e-bike dealers in 4 months within vendor budget, writing the specs an external vendor built from; cut claim communication from 2 weeks to 2 days and raised parts payment success from 63% to 92%.
- Improved the reliability of a connected e-bike app used by 50,000+ riders across 50+ bike models, aligning app, firmware, hardware, and QA teams. On Android, raised Bluetooth pairing success from 21% to 90%, firmware update success from 65% to 99% (related support tickets down 90%+), and crash-free users from 78% to 98%.
- Led two AI products: launched a GPT-powered query app adopted by e-bike brand customers, and ran a proof of concept for an AI assistant answering dealer service questions, testing its answers against service data to define reliable scope.
- Prioritize requests by user value, dependencies, and team capacity, and recommend release scope to leadership; introduced structured sprint planning and clearer acceptance criteria, cutting development cycles by up to 80%.
- Defined requirements for a mobile tuning app that lets e-bike brands adjust motor ride feel themselves; adopted by 72 brands, saving an estimated US\$30,000 in engineer travel.

UI/UX Designer

Jul 2020 – Mar 2022

Hyena Inc., Taichung, Taiwan

- Redesigned the core flows of the company's rider app (v1.0 to v2.0) based on usability testing and analytics, improving user stickiness by 36%.
- Designed a production-line interface showing operators each station's tasks, progress, and test errors, based on operator and supervisor interviews; the system reduced production time by 20–30%.

Interaction Designer

Mar 2019 – Feb 2020

Kiipo (Labfront), Taipei, Taiwan

- Designed healthcare research apps for non-technical users, iterating flows and prototypes across mobile, web, and marketing site through usability testing.

Industrial Designer

Jul 2016 – Aug 2018

iThinking Inc., Taichung, Taiwan

- Released 3 hand tools from concept to production, working with manufacturing teams on prototypes and manufacturability.

Skills

- **Product:** Product Discovery · Prioritization & Scoping · Roadmapping · PRDs & Specifications · Agile / Scrum · Tracking Plans & Metrics · B2B / B2C
- **Design:** User Research · Usability Testing · User Flows · Prototyping · UX Writing
- **Tools:** Jira · Notion · Figma · Amplitude · Firebase Crashlytics · OneSignal · Testmo · Miro

Education

Bachelor's Degree, Industrial Design

Sep 2012 – Jun 2016

Da-Yeh University, Changhua, Taiwan
